Testimonials

"I predict that the Smart Thermostat will increase my business dramatically. It gives me a one up on the competition right now and I am working hard to get it in as many homes as possible."

- J.D., ecobee Contractor

"I like all of the new changes. The user account control is great so that I can lock it down and prevent changes to the set up. I also like the view on the weather and programming screens! Great job!"

- A.G., ecobee Customer

"In an era where customer service is lacking, I am still stunned by ecobee's response to my situation which went far beyond my expectations. In fact, I have never seen this level of customer service. Moreover, the ecobee unit itself has exceeded my expectations. I now find myself speaking to others of my whole experience with ecobee as an example of what customer service ought to be. This is a product and a company that I am pleased to recommend."

- P.T., ecobee Customer

"We love our ecobee Smart Thermostat. We have two homes and split time between them. So it is great to be able to access and set the thermostat remotely."

- J.N., ecobee Customer

Exceed Your Customers' Expectations

The ecobee Smart Thermostat is easy for your customers to use and program resulting in increased sales, fewer call backs and greater profitability for you. The full color touch screen is simple to navigate while the wizard programming function and intelligent recovery automates energy conservation without sacrificing comfort.

The ecobee Smart Thermostat is internet enabled, connecting quickly and simply to the homeowner's wireless router. This means that the Smart Thermostat is accessible anywhere, anytime, through any web browser or through an iPhone. Internet enabled two-way communication means that ecobee can send contractor branded alerts and reminders, keeping you in contact with your customers and protecting your annual service agreements.

ecobee regularly uploads new features and functionality to the Smart Thermostat, which means it will never become obsolete. From a 5 day live weather feed to our proprietary algorithms, the Smart Thermostat delivers unmatched performance, intelligence and energy savings.

Helping You Build Your Business

Central to the ecobee Smart Thermostat is the Contractor portal. This web based tool provides you with the ability to remotely manage all of your installed ecobee thermostats. Locate your thermostats on a Google map, search your personal customer database, schedule service reminders and upload your business information and company logo. This tool will help deepen your customer relationships as alerts and service reminders to your customers will appear with your company logo and contact information.

In addition to the Contractor portal, ecobee has designed the Smart Thermostat so that installations are consistently smooth and straight forward. Our installation wizard provides a simple checklist for configuring the thermostat and technicians can view a wiring diagram on the thermostat at any time. The Smart Thermostat is always a 4-wire install, virtually eliminating the need to run wires regardless of the equipment configuration.

The ecobee Smart Thermostat; the smart choice for the smart contractor.

Quality, Reliable, Connected

The ecobee Smart Thermostat was designed and built in partnership with HVAC contractors resulting in a product that is reliable, efficient to install and delivers superior customer satisfaction.

ecobee is connected to our contractor partners and is here to help you every step of the way. Our website, www.ecobee.com/technician, contains resources, manuals and guides on how to install and service the ecobee Smart Thermostat. If you require immediate attention you can contact our technical support team at 1.877.9.ecobee (1.877.932.6233) or email at support@ecobee.com

Connected - to you, your customer and your business success.
